**EUPHORIA TOWNSHIP MUNICIPAL AUTHORITY
WASTEWATER TREATMENT CONSTRUCTION PROJECT
PROJECT NARRATIVE
FEBRUARY 1999**

PROJECT SCOPE

The proposed project includes the construction of some 165,240 linear feet of 8- and 10-inch diameter sanitary sewers, 14,470 linear feet of 3-, 4-, and 10-inch diameter force main, and eight pump stations to serve 1,004 customers in Euphoria Township, Tishomingo County, Pennsylvania. The areas that will be served by the project include the Buford Heights, Chalmer's Beach, Rodney Bridge, Morton Stop, and Rice's Crossroads sections of the Township.

Currently, the primary sewage treatment and disposal method within Euphoria Township is individual, on-lot subsurface sewage disposal systems. Mass sewage malfunctions have been noted in Pennsylvania Department of Environmental Protection (DEP) and Authority surveys. Construction of sanitary sewers to serve these areas of the Township will meet the wastewater disposal needs of 50 percent of the Township and will virtually eliminate malfunctioning on-lot sewage disposal systems in the project area.

Sewage flow from the project area will be conveyed to the Borough of Sturgis (BOS) wastewater treatment facility for treatment and ultimate disposal. The BOS has just completed a sewage treatment plant expansion project, and the plant has sufficient capacity to treat the flows from Euphoria Township, including future growth. The sewers will connect to the Grierson Street pump station and the McMillen Creek pump station, which are owned and operated by the BOS.

NEEDS ANTICIPATED TO BE MET BY PROJECT

The construction of public sewerage facilities is necessary to meet several needs of the service area. These needs include health and safety, economic development, the environment, federal and state regulations.

Health and Safety

In 1991, the DEP conducted a survey in the Buford Heights area of Euphoria Township. According to DEP's survey.

"A number of properties did not appear to have room available to install adequate on-lot sewage disposal systems or to repair any malfunctioning systems. Many of the homes, in fact, appear to be piping the sanitary waste away from the properties through a wildcat sewer system. The situation in this area is creating not only a nuisance problem, but also jeopardizing the health and welfare of the residents in the area."

A survey performed by the Euphoria Township Municipal Authority in 1997 documented that the incidence of septic tank malfunctions in the project area is well over 50 percent. Malfunctioning on-lot sewage disposal systems are contributing inadequately treated sewage discharges to the ground and surface waters of the project area and are creating a potential health hazard. Photographs of some of the observed direct sewage discharges, raw sewage flowing in ditches, sewage from septic fields ponding in the ditches, and sewage in storm sewer catch basins are attached to this project narrative.

Also, in 1997 the Township's Sewage Enforcement Officer (SEO) noted that the sewage situation in Euphoria Township had reached a "tragic point." In fact, according to the SEO, over 90 percent of the homes had sewage piped to the surface of the ground, into storm drainage ditches along the roads, or directly into the waters of the Commonwealth.

Economic Development

Construction of public sewerage facilities often stimulates residential, commercial, and industrial development within a community. It is likely that this phenomenon will occur in Euphoria Township when sanitary sewers are constructed, especially when consideration is given to the impacts of the Guntown Valley Expressway currently under construction. The project will allow development to occur in areas of the Township in which development is presently not possible because of inadequate sewerage facilities.

Environment

Discharge of raw or inadequately treated sewage into local waterways exerts an oxygen demand and produces nutrient loadings that can exceed the assimilative capacity of the stream. Inadequately treated wastewater lowers dissolved oxygen concentrations in receiving watercourses and can render affected stream reaches uninhabitable to aquatic life. Increased nutrient loadings may result in algal blooms or excessive levels of aquatic plant life which further deplete dissolved oxygen levels, impede stream flow, produce odors, and lower the aesthetic value of the waterway. Elimination of inadequately treated wastewater discharges will improve local ground and surface water quality, and the overall environmental setting of the area will be enhanced.

Federal and State Regulations

Project implementation will eliminate raw sewage discharges to the environment and allow Euphoria Township to comply with the Clean Streams Law and other regulations that are currently being violated due to existing sewage disposal problems. Discharge of untreated sewage to the waters of the Commonwealth of Pennsylvania violates numerous state and federal laws in addition to being a nuisance and creating a potential health hazard.

ENVIRONMENTAL AND PUBLIC HEALTH RESULTS AND BENEFITS

The project will eliminate 1,004 failing on-lot wastewater disposal systems. This will correct a nuisance and source of local public health risk. The sanitary wastes from the Township families with failing disposal systems will be treated properly. The local groundwater will be protected from the improper disposal of inadequately treated wastewater. The welfare of the residents will improve with the provision of a wastewater disposal system that is adequate for modern lifestyle needs.

ESTIMATED TOTAL PROJECT COST

The estimated total project cost is \$11,265,050. Construction of the sanitary sewers and pump stations is estimated at \$9,778,650, which includes a 5 percent contingency. The Authority applied for and received a Pennsylvania Infrastructure Investment Authority low interest loan to finance \$6,136,600 of the project costs. The 45 percent local share match required for the \$2,500,000 Special Appropriations Grant will come from tapping fees.
